Open Chrome Console

•Make sure you are on the **No Internet Connection** page.

•Right click anywhere on the page and select **Inspect**.

•Go to **Console** tab. This is where we will enter the commands to tweak the game.

Tweaking Speed

Type the following command in Console and press enter. You can use any other speed in place of 1000.

```
Runner.instance_.setSpeed(1000)
```

Immortality

```
var original = Runner.prototype.gameOver
Runner.prototype.gameOver = function(){}
```

Stopping the game after using Immortality

```
Runner.prototype.gameOver = original
```

Setting the current score

Let's set the score to 12345. You can set any other score less than 99999. The current score is reset on game over.

```
Runner.instance_.distanceRan = 12345 /
Runner.instance_.distanceMeter.config.COEFFICIENT
```
